

## Diesel System Cleaner

**Bardahl Diesel System Cleaner** recovers injection system and engine power. It stops black exhaust smoke cleans pumps, injectors and combustion chambers

### The problem

Depending on the origin from the harsh crude and refining technique, diesel fuels strongly differ from each other. This, with an irregular driving pattern ensures constipation of the injection system, irregular run of the engine, badly start, higher fuel consumption and strong smoke development as a result of bad combustion.

### The action

**Bardahl Diesel System Cleaner** contains a careful formulation which cleans the sprays and maintained without dismantling them. This product has been especially developed for professional use in garages.

### Direction for use

**As an preventative treatment:** Pour the capacity of 1 can every 10.000km into the fuel tank. One can treats 20ltrs of diesel fuel.

**As an corrective treatment:** With a warm engine disconnect the suction pipe and return tube of the injection pump and place them into the can Diesel Injection cleaner. Start the engine and run the product. Vary the speed until the engine has used total quantity of the product.

Reconnect the suction and return pipes. Start the engine and adjust timing and idle speed as required.
